

# PRIMERA PRACTICA FORTRAN

Ana Magdalena Sotomayor

4 de marzo de 2015

## 1. INTRODUCCION

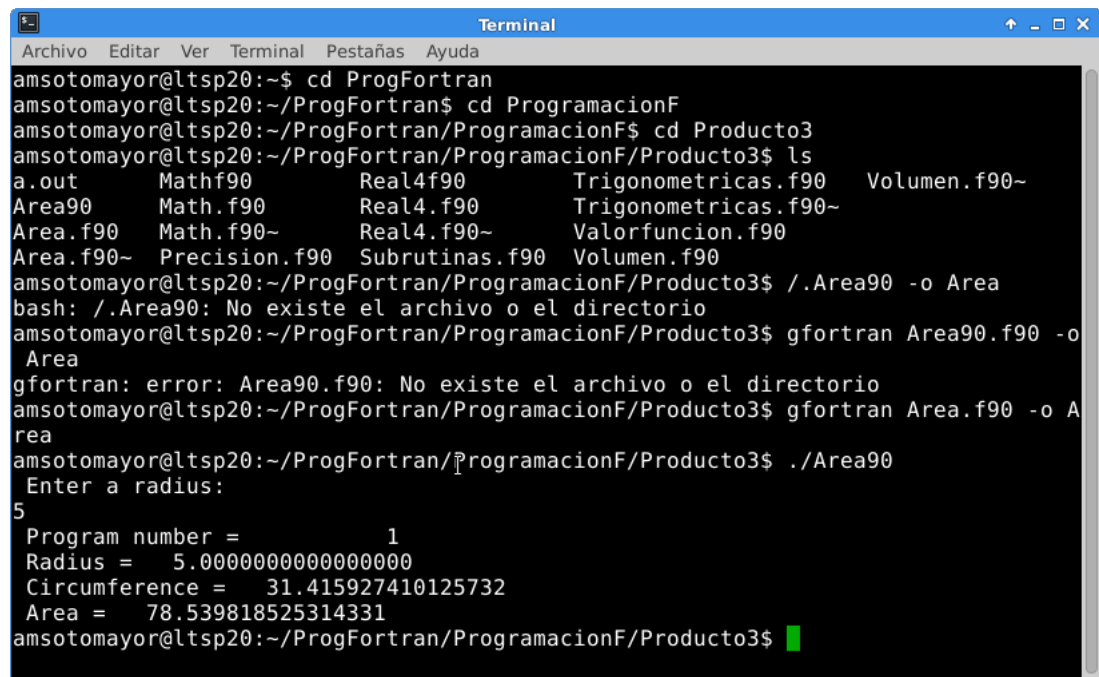

Se codificaron 8 nuevos programas tales que realizan operaciones para obtener el area de un circulo, el volumen de un liquido dentro de una esfera, funciones trigonometricas, Comprobacion de la precision numerica del ordenador en 8 bits y 4 bits y los valores de diferentes funciones matematicas.

## 2. CODIGOS

### 2.1. Calcular el área de un circulo

```
! Area . f90 : Calculates the area of a circle, sample program
Program areacirculo ! Begin main program
  Implicit None ! Declare all variables
  Real *8 :: radius , circum , area ! Declare Reals
  Real *8 :: PI = 4.0 * atan(1.0) ! Declare , assign Real
  Integer :: model_n = 1 ! Declare , assign Ints
  print * , 'Enter a radius:' ! Talk to user
  read * , radius ! Read into radius
  circum = 2.00 * PI * radius ! Calc circumference
  area = radius * radius * PI ! Calc area
  print * , 'Program number =' , model_n ! Print program number
  print * , 'Radius =' , radius ! Print radius
  print * , 'Circumference =' , circum ! Print circumference
  print * , 'Area =' , area ! Print area
End Program areacirculo ! End main program code
```

## 2.2. Imagen de salida

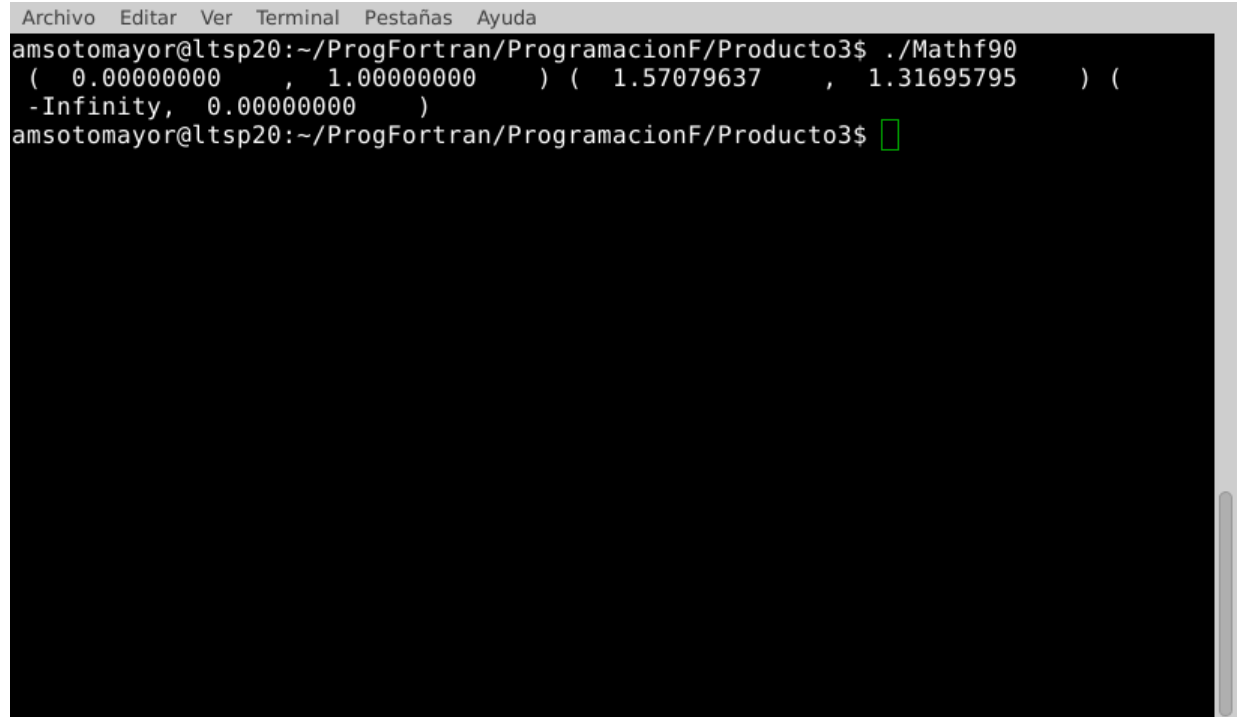

```

bash: ./Area90: No existe el archivo o el directorio
amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$ gfortran Area90.f90 -o
Area
gfortran: error: Area90.f90: No existe el archivo o el directorio
amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$ gfortran Area.f90 -o A
rea
amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$ ./Area90
Enter a radius:
5
Program number =          1
Radius =    5.0000000000000000
Circumference =  31.415927410125732
Area =    78.539818525314331
amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$
```

## 2.3. Calculos Matematicos

```
! Math . f90 : demo some Fortran math functions
Program Math2! Begin main program

Complex *8 :: x=- 1.0 , y=2, z=0 ! Declare variables x, y, z
x = sqrt (x)
y = asin (y) ! Call the sine function
z = log (z) ! Call the exponential function
print * , x, y, z ! Print x, y, z
End Program Math2 ! End main program
```

## 2.4. Imagen de salida

```

amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$ ./Mathf90
( 0.00000000 , 1.00000000 ) ( 1.57079637 , 1.31695795 ) (
-Infinity, 0.00000000 )
amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$ █
```

## 2.5. Precision del Ordenador con numeros Reales en 8 bits

```
! Limits . f90 : Determines machine precision
Program Limits
  Implicit None
  Integer :: i , n
  Real *8 :: epsilon_m , one
  n=60 ! Establish the number of iterations
  ! Set initial values :
  epsilon_m = 1.0
  one = 1.0
  ! Within a DO-LOOP, calculate each step and print .
  ! This loop will execute 60 times in a row as i is
  ! incremented from 1 to n ( since n = 60) :

do i = 1, n , 1 ! Begin the do-loop
  epsilon_m = epsilon_m / 2.0 ! Reduce epsilon m
  one = 1.0 + epsilon_m ! Re-calculate one
  print * , i , one , epsilon_m ! Print values so far
end do ! End loop when i>n
```

End Program Limits

## 2.9. Subrutinas

```
! Subroutine . f90 : Demonstrates the call for a simple subroutine
! -----
Subroutine g(x, y, ans1 , ans2 )
  Implicit None
  Real (8) :: x , y , ans1 , ans2 ! Declare variables
  ans1 = sin (x*y) + 1. ! Use sine intrinsic func.
  ans2 = ans1**2
End Subroutine g
!
Program Mainprogram ! Demos the CALL
  Implicit None
  Real *8 :: Xin =0.25 , Yin =2.0 , Gout1 , Gout2
  call g( Xin , Yin , Gout1 , Gout2 ) ! Call the subr g
  write ( * , *) 'The answers are: ' , Gout1 , Gout2
End Program Mainprogram
```

## 2.10. Imagen de salida

A screenshot of a terminal window with a menu bar at the top containing 'Archivo', 'Editar', 'Ver', 'Terminal', 'Pestañas', and 'Ayuda'. The terminal shows the following text:

```
amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$ ./Subrutinas
The answers are:      1.4794255386042030      2.1886999242743364
amsotomayor@ltsp20:~/ProgFortran/ProgramacionF/Producto3$
```

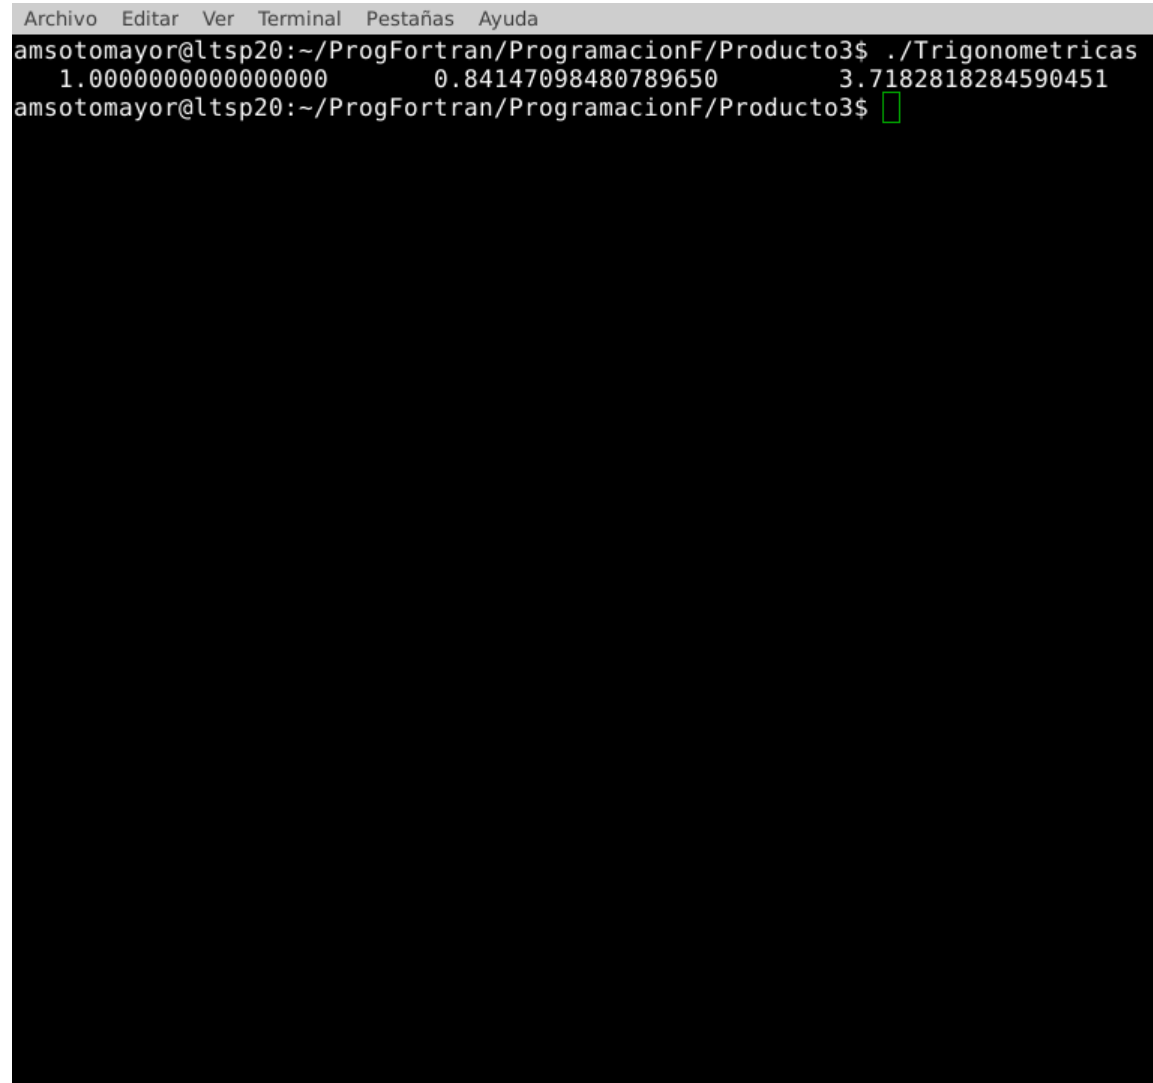

## 2.11. Funciones Trigonometricas

```
! Math . f90 : demo some Fortran math functions
!
Program Mathtest! Begin main program

      Real *8 :: x = 1.0 , y, z ! Declare variables x, y, z
      y = sin (x) ! Call the sine function
      z = exp (x) + 1.0 ! Call the exponential function
```

```
print * , x, y, z ! Print x, y, z
End Program Mathtest ! End main program
```

## 2.12. Imagen de salida
